

EZ WIFI CONTROLLER UPDATE FORM

Our second generation of the EZ Wifi Controller enables users to receive over-the-air firmware updates, including Amazon Alexa integration and cloud connection. If you purchased a previous version of the EZ Wifi Controller, these over-the-air updates are not programmed into the controller. We want all of our customers to access our cutting-edge innovations, which is why we're offering free EZ Wifi Controller programming updates.

Check the back of your controller for a serial code that indicates the version number. If the serial code on the back of the controller is not **Wd 2_0** (Ex: Wd1_7), you have an older version of the controller.

Fill out the contact form below and place it in the package with your EZ Wifi Controller. Once we receive your shipment, we'll program your EZ Wifi Controller with the latest program update and ship it back to you.

Ship EZ Wifi Controller back to:

Dekor Lighting
2655 S. Santa Fe Drive #4-A
Denver, CO 80223
