MECHANICAL

PAVERLITE™ LED landscape lights are compatible with 6” x 9” paving blocks. When installing lights in multi-block patterns compensate for the length variation by applying 1/2” of grout at the end of each light. In some circumstances you may choose to cut 1” off a standard 9” long block to match the light length, rather than grout. The PAVERLITE™ is completely sealed and may be installed in the ground.

ELECTRICAL

Connect wires from each PAVERLITE™ in parallel, then connect to a 12 Volt AC or DC, low-voltage transformer with a secondary rating of at least 300 watts. Each PAVERLITE™ has built-in voltage regulation circuitry that is designed to extend the life on the LED by eliminating an voltage fluctuations. Use certified waterproof wire connectors that are copper, copper alloy, or equivalent, with corrosion protection and intended for outdoor use that guard against inadvertent shorting of the current carrying parts. Use only wire that is rated for underground use. Wire is available for purchase on our website.

CAUTION: Operating PAVERLITE™ Landscape LED lighting during the “Bright Sunlight” of the day can shorten the life of the lights. A light sensor on-off switch is recommended.
